

mercuryIR - Digital Interview Recording

Evidential standard recording for police, hearings and tribunals

Features

- Standard DVD files
- Touch screen for data input
- XML metadata stored with recordings
- Standard microphones and cameras
- Simple start and stop button
- Desk or wall mount
- Evidential quality
- Live remote monitoring
- Solid state hard disk
- Transcription tools

Specifically designed for interview recording, this self contained unit is easy to use and delivers high quality evidential interviews in DVD file format. Capturing an undisputable record of proceedings, the recording is electronically combined with user inputted metadata and may be replayed in standard DVD players.

Easy to use with an automated onscreen guide, relevant text based data such as interviewer and interviewee names are readily entered via the ergonomic touch screen. The recorder automatically guides users through each seamless step ensuring high quality recordings are produced every time.

Interviewers can be confident of consistently good recording quality through the use of intelligent live monitoring throughout the duration of the recording, automatically alarming

should a quality issue be detected.

Our secure and proven recording systems are in daily use around the world with customers operating in Government, Police, Military and Commercial environments.

Benefits

- One fully integrated solution
- Financial saving - no cassette or VHS tapes
- Proven and secure solution
- Maintenance free, no license
- Helpful workflow and file tracking visibility
- Low cost of ownership - no annual license
- Integral touch screen keyboard and automated workflow for metadata

A flexible, scalable solution that can be standalone or networked for remote management with a central repository

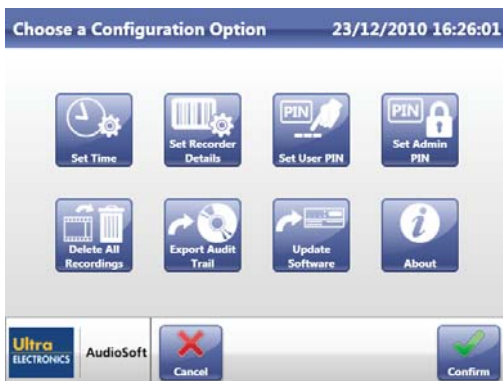

Connect this unit to your network and recordings will be automatically transferred and stored centrally. Multiple recorders may be supported, concurrently recording onto the same server.

Optionally available is a content management solution, Medirva® which is a browser based content management repository for the storage, management and control of the full lifecycle of many thousands of recordings.

Full training and ongoing support from our dedicated team of engineers provides peace of mind and our use of industry standard hardware readily supports evolving upgrades to our system in line with your changing business requirements.

AudioPC-IR – self contained video recorder, robust and reliable, producing multiple DVD recordings simultaneously. Uses standard camera and microphone connections and may be desk or wall mounted.

Our intuitive touch screen interface is used to input metadata prior to interview start and conforms to a customisable workflow
